

Minimally Invasive SI Joint Fusion with the iFuse TORQ[®] Implant System

Your physician has decided to use **iFuse TORQ[®] implants** for your procedure. The 3D printed surface is similar to cancellous bone and has the same **iFuse Technology[®]** used in SI-BONE's triangular titanium implants.

The iFuse TORQ implants are designed with cutting-edge features intended for fixation and fusion. Please consult your physician to discuss the benefits and risks of this implant.

Minimally invasive lateral transiliac SI joint fusion is a safe and effective treatment for chronic SI joint pain.¹

Since 2009, SI-BONE has been a trailblazer in the treatment of SI joint dysfunction, offering products with supporting clinical evidence for the effective management of this condition. We have developed a range of cutting-edge solutions that have evolved over the years to cater to the individual needs of patients and providers.

To learn more about SI joint dysfunction, the iFuse TORQ Implant System, and other patient resources, scan the QRC below:

The **iFuse TORQ® Implant System** is indicated for:

- Fusion of the sacroiliac joint for sacroiliac joint dysfunction including sacroiliac joint disruption and degenerative sacroiliitis.
- Augmenting immobilization and stabilization of the sacroiliac joint in skeletally mature patients undergoing sacropelvic fixation as part of a lumbar or thoracolumbar fusion.

The iFuse TORQ Implant System is also indicated for fracture fixation of the pelvis, including acute, non-acute, and non-traumatic fractures and non-traumatic fractures.

Healthcare professionals should refer to the Instructions For Use for indications, contraindications, warnings, and precautions at www.si-bone.com/label.

There are potential risks associated with iFuse procedures. They may not be appropriate for all patients and all patients may not benefit. For information about the risks, visit www.si-bone.com/risks.
